Summary

Data Engineer experienced in building and maintaining production data pipelines on **Google BigQuery** for finance and logistics clients. Delivered end-to-end Accounts Payable and Accounts Receivable pipelines, payment-gateway and bank reconciliations, and financial reporting (Balance Sheet, P&L) across multiple client accounts. Experienced in developing React-based dashboard components, automating scheduled workflows, and translating business requirements from finance stakeholders into reliable, auditable data models, with **16+ use cases delivered** to production.

Work Experience

Data Engineer — Bluecopa Sep 2025 – Present

- Built and maintained end-to-end **ELT pipelines using BigQuery SQL** for a last-mile logistics client, covering Accounts Payable and Accounts Receivable use cases, including **16+ use cases** across client accounts.
- Developed rider payroll and payout logic using effective-dated rate-card joins, Minimum Guarantee (MG) eligibility, top-up rules, attendance, OFF-day compliance, and multiple payout models consolidated into unified schemas.
- Designed cost models for multi-fulfillment centers (MFC), incorporating manpower classification, depreciation, and usage-based billing to support CFO-level dashboards and financial analysis.
- Implemented **PG vs PG Charges and PG vs Bank reconciliations** for a travel-tech client, including a custom portal, workbooks, and metrics to identify and track unmatched transactions.
- Built financial reporting pipelines generating **Balance Sheet and P&L** statements for a financial services client, along with data workflows supporting a D2C consumer brand.
- Developed **React-based customer dashboard components**, including rate-card viewers, and created technical documentation for client-facing solutions.
- Automated data refresh and processing workflows using triggers and scheduled executions, while troubleshooting schema mismatches and data-quality issues and supporting UAT with client finance teams.

Freelance Computer Science Q&A Contractor — Chegg India Pvt. Ltd. Mar 2022 – Jan 2023

- Solved advanced Computer Science problems across Data Structures, Algorithms, DBMS, and Operating Systems within strict turnaround SLAs.
- Delivered accurate, plagiarism-free solutions in a remote, independent engagement model.

Projects

RetailMart SQL Analytics Dashboard View Project

- Built an end-to-end PostgreSQL retail analytics platform with 25+ analytical views and 10 materialized views across sales, customer, product, store, operations, and marketing domains.
- Improved data reliability and query performance through data quality checks and optimized indexes; automated analytics refresh and JSON exports with execution logging.
- Developed a responsive multi-tab dashboard with interactive KPIs, trends, alerts, and domain-level analytics.

Weather Analysis View Project

- Analyzed weather data for 50+ cities (2012–2017) using SQL to identify seasonal trends and anomalies in temperature, rainfall, wind, and pressure.
- Built interactive Power BI dashboards with DAX, including heatmaps and time-series trends.

Skills

Languages	SQL (BigQuery, PostgreSQL), Python, JavaScript (React)
Data Engineering	ELT Pipelines, Data Modeling, Workflow Automation, Data Reconciliation, Data Integration, Data Quality Checks
Finance Domain	Accounts Payable / Receivable, PG & Bank Reconciliation, Balance Sheet, P&L, Payout & Rate Card Modeling
Dashboarding	React Custom Components, Power BI, DAX, Data Visualization
Tools	Google BigQuery, Bluecopa, PostgreSQL, MS Excel, Power Query, Git/GitHub, VS Code, Google Colab
Soft Skills	Stakeholder Communication, Requirement Gathering, Analytical Thinking, Documentation

Education

MBA (Information Technology), Dr. A.P.J. Abdul Kalam Technical University, Lucknow 2024–2026

B.Tech (Information Technology), Dr. A.P.J. Abdul Kalam Technical University, Lucknow 2019–2023

Certifications

- Fundamentals of Data Analysis in Excel View
- Machine Learning using Python View
- Data Science Fellowship at DataPlay View
